In physics, any frame of reference can be chosen as long as it is used consistently. If you are consistent, you will get the same results, no matter which frame of reference you choose. But some frames of reference can make explaining things easier than other frames of reference. For example, when considering the motion of the gecko in Figure 2-2, it is useful to imagine a stick marked in

PHYSICS IN ACTION A mechanical metronome consists of a pendulum that vibrates around a pivot. Below the pivot is a counterweight. A sliding weight above the pivot can be positioned to change the rate of vibration. As the pendulum vibrates, the metronome produces a ticking sound, which musicians use to keep a steady tempo. The vibrations of a metronome are an example of a periodic motion known

Forces and the Laws of Motion Problem C NEWTON'S SECOND LAW PROBLEM A 15 kg ball has an acceleration of  $9.0 \text{ m/s}^2$  to the left What is the net force acting on the ball? SOLUTION Given:  $m = 15 \text{ kg}$   $a = 9.0 \text{ m/s}^2$  to the left Unknown:  $F = ?$  Use Newton's second law, and solve for  $F$   $\Sigma F = ma$  Because there is only one force,  $\Sigma F = F$   $F = (15 \text{ kg})(9$
